Excavate these words with our **Elements** WORDSEARCH. Find the names of some of the known natural and artificial elements. Words go up & down, left & right and diagonally.

There is no answer list for this wordsearch. To confirm you have found them all you will need to find the atomic number for each element you find; then add them up to produce a total. Check your total against the answer on this sheet. How many can you find?

The total atomic number for the elements in the grid is **1806**. If you have not reached this number then are still some more to find. If your total is more than this then congratulations - you have discovered a hitherto unknown element!

One element is repeated twice, but you can only use it once, which is it?
